Advancing the world’s largest and most attractive diamond development project

Star - Orion South Diamond Project & Fort à la Corne Diamond District
CORPORATE PRESENTATION

November 19, 2020
Forward Looking Statements

This presentation contains "forward-looking statements" and/or "forward-looking information" within the meaning of applicable securities laws (collectively referred to as "forward-looking statements"). Forward-looking statements are often, but not always, identified by the use of words such as "anticipate", "believe", "expect", "plan", "intend", "forecast", "target", "project", "guidance", "may", "will", "should", "could", "estimate", "predict" or similar words suggesting future outcomes or language suggesting an outlook. In particular, statements regarding Star Diamond Corporation’s (the “Company” or “Star Diamond”) future operations, future exploration and development activities or other development plans constitute forward-looking statements. By their nature, statements referring to mineral reserves, mineral resources or Star Diamond’s Preliminary Economic Assessment (“PEA”) of the Star and Orion South kimberlites (the “Project”) constitute forward-looking statements. Forward-looking statements contained or implied in this presentation include, but are not limited to, disclosures regarding the economics and project parameters presented in the PEA, including, without limitation, Internal Rate of Return, Net Present Value and other costs and economic information, carats of diamonds to be recovered, after-tax payback period, tonnes of kimberlite to be mined, carats per tonne to be recovered (grade), diamond prices, Project life, life of mine, capital costs, and length of pre-production period; statements related to mineral resources and/or reserves; statements related to the approval of the development of the Project; statements relating to future development of the Project and associated timelines; statements with respect to environmental permitting and approvals; statements with respect to metallurgical investigations, assessments and test work; the potential proportion of Type IIa diamonds in the Project and the potential for the recovery of large high quality diamonds; statements regarding the processing and analysis of, and reporting of results from, the bulk samples previously collected by Rio Tinto Exploration Canada Inc. (“RTEC”) and the timeline for doing so; and statements related to the legal proceedings commenced by the Company against RTEC.

These forward-looking statements are based on the Company’s current beliefs as well as assumptions made by and information currently available to it and involve inherent risks and uncertainties, both general and specific. Although management considers the assumptions contained in the forward-looking statements to be reasonable based on information currently available to it, those assumptions may prove to be incorrect and actual results may not be consistent with these forward-looking statements.

Forward-looking statements involve significant risks and uncertainties, should not be read as guarantees of future performance or results, and will not necessarily be accurate indications of whether such results will be achieved. Risks exist that forward-looking statements will not be achieved due to a number of factors including, but not limited to, developments in world diamond markets, changes in diamond prices, risks relating to fluctuations in the Canadian dollar and other currencies relative to the US dollar, changes in exploration, development or mining plans due to exploration results and changing budget priorities of the Company or RTEC, risks related to the legal proceedings commenced by the Company against RTEC, including the outcome of such legal proceedings, the effects of competition in the markets in which the Company operates, the impact of the COVID-19 pandemic, risks related to the operation of the on-site Bulk Sample Plant and the processing methods being used by RTEC and the effectiveness thereof, the impact of changes in the laws and regulations regulating mining exploration, development, closure, judicial or regulatory judgments and legal proceedings, operational and infrastructure risks and the additional risks described in the Company’s most recently filed Annual Information Form, annual and interim MD&A, news releases and technical reports. The Company’s anticipation of and success in managing the foregoing risks could cause actual results to differ materially from what is anticipated or implied in such forward-looking statements.

When making decisions with respect to the Company, investors and others should not place undue reliance on these statements and should carefully consider the foregoing factors and other uncertainties and potential events. The forward-looking statements in this presentation are expressly qualified by this cautionary statement. Unless required by applicable securities law, the Company does not undertake to update any forward-looking statement that is made herein.
Star Diamond is Advancing the World’s Largest and Most Attractive Diamond Development Project

- **Large, long-life mine:** ~66 million carats over 38-year mine life
- **Outstanding geology:** large, contiguous diamond bearing kimberlites hosting very attractive diamonds
- **Attractive economics:** $2.0 billion / 19% IRR (Base Case) with 3.4 year payback
- **Low-risk jurisdiction:** Saskatchewan, Canada, near existing power and transportation infrastructure
- **Fully-permitted:** federal and provincial environmental permits in place

Star – Orion Results Indicate Favourable Comparison to Current Producers

- Valuation of diamond deposits dependent on tonnes, grade and diamond price
- Diamond price is unique for each kimberlite
- Star and Orion South have significant carats combined with high price
- Diamond size frequency distribution (SFD) is unique to the kimberlite being sampled
- Upside of large diamonds in future production due to coarse diamond size frequency distribution

Values presented are the best estimates in the public domain at the time of preparation
Star and Orion South Kimberlites are Well-Understood and Project is Well-Advanced

- Diamond exploration began in 1995
- Bulk sampling programs conducted between 2003-2009
- 200 carats from Star bulk sample selected for cutting and polishing in 2007, proving high-quality polished diamonds could be produced from Saskatchewan diamonds
- A number of technical reports were produced between 2009-2014
- MOUs with First Nations and Métis signed between 2010-2014
- Completed revised mineral resource update in 2015 for Star - Orion South
- Announced positive results of Preliminary Economic Assessment in 2018

Environmental Approvals Obtained
OCTOBER 2018

RTEC Trench Cutter Sampling
OCTOBER 2019

Bulk Sampling Plant Commissioning
APRIL 2020

First RTEC Trench Cutter Results
AUGUST 2020
Ideal Location and Jurisdiction

- Saskatchewan: very stable geo-political jurisdiction (rated #2 Mining Investment Jurisdiction by Fraser Institute)
- Constructive and collaborative relationships with First Nations and Metis; strong support from local stakeholders
- Federal and provincial environmental approvals in place
Proximity to existing infrastructure and labour significantly lowers operating costs

- Project is less than 20km from paved highway
- Access to provincial power grid
- Access to pool of local skilled workers including from local communities
Attractive Geology: Extensive Kimberlites

- Large, contiguous diamond bearing kimberlites hosting very attractive diamonds.
- Star - Orion South Project located in the south-eastern part of Star Diamond’s properties.
- More than 60 additional kimberlites represent exploration upside potential.
PEA Site Layout – General Arrangement

- Two open pits with a centralized processing plant
- Star - Orion South Project located in southern area of Star Diamond properties
Star and Orion South Kimberlites - Core, Large Diameter Drilling and Underground Bulk Sampling

- Resource is well-understood as a result of extensive archival and current drilling
- Core drilling to define the extent and internal structure of the kimberlite
- Large Diameter Drilling for grade determination across the kimberlite
- Underground bulk sampling for grade determination and diamond price estimation
Star and Orion South Kimberlites - Core, Large Diameter Drilling and Underground Bulk Sampling

LARGE DIAMETER DRILLING
Attractive Geology

• Bulk samples have delivered excellent results:
  – Star: over 75,000 tonnes of ore yielded nearly 11,000 carats, including a 49-carat stone
  – Orion South: over 23,000 tonnes of ore yielded 2,300 carats, including a 45-carat stone

• Star and Orion South diamond populations have coarse size frequency distributions: potential for the recovery of large stones in future production

• Unusually high proportion of valuable Type IIa stones, which are rare and account for less than 1.3% of global production

• High average diamond price (more than double the world average) driven by quality, colour, shape and size

WEIGHTED AVERAGE PRICE
(Per Carat USD)

Star:
$210

Orion South:
$169

Star & Orion South:
$190

Valuation April 2018 WWW International Diamond Consultants
High Value Diamonds

- Evaluation parcel recovered to date includes these high value diamonds
- High value diamonds include internally flawless octahedra, fancy yellow diamonds and large top white Type IIa diamonds
Star - Orion South Contains a Significant Percentage of High-Value Type IIa Diamonds

- Type IIa diamonds:
  - contain no nitrogen or boron impurities
  - usually top white or brown and can also be pink
  - rare and account for less than 1.3% of annual world production

Bulk Sampling Program & Site Work Underway

- Rio Tinto Exploration Canada (RTEC) has embarked on a complex bulk sampling program using new technology derived from civil engineering applications.
- RTEC has completed drilling of ten holes using a trench cutter bulk sampling rig.
- On site bulk sample storage building has been constructed to allow for year-round, all-weather sample processing.
- Bulk sample plant has been commissioned and processing of kimberlite from the ten trenches from the Star kimberlite is advancing.
- 150 person camp has been established on-site.
- Rio Tinto refers to Star Diamond’s mineral dispositions in the Fort à la Corne diamond district as the “FalCon” project.

RTEC Trench Cutter
Holes (10) drilled on the Star Kimberlite during 2019, in relation to historical underground workings and LDD holes.

On-site Bulk Sample Plant and cubic metre bulk bag storage area (October 21, 2020)
In 2019, RTEC provided notice to Star Diamond for the exercise of all four options under the Option to Joint Venture Agreement despite not completing the bulk sampling program and using technologies that appear to be causing undue diamond breakage.

Star Diamond has commenced legal proceedings against RTEC in relation to RTEC’s purported exercise of the Options and the related issues Star Diamond has raised with RTEC.

Star Diamond believes RTEC's extraction and diamond recovery methodologies, including its use of unproven civil engineering trenching technologies to conduct bulk sampling of Kimberlite, is causing undue diamond breakage, resulting in significant unnecessary cost overruns and materially damaging Star Diamond's interest in the project.

Extensive background with over 35 years experience in all aspects of natural resource exploration and development

George Read
Senior Technical Advisor
Diamond exploration geologist with 36 years of international experience

Greg Shyluk
Chief Financial Officer
Chartered professional accountant with 20 years experience with mining and natural resource companies

Mark Shimell
Project Manager
Exploration geologist with 22 years of international experience
With an Excellent Location, Geology & Economics, Star Diamond is Advancing the World’s Largest & Most Attractive Diamond Development Project

• **Large, long-life mine**: ~66 million carats over 38 year mine life
• **Outstanding geology**: large, contiguous diamond bearing kimberlites hosting very attractive diamonds
• **Attractive economics**: $2.0 billion / 19% IRR (Base Case) with 3.4 year payback
• **Low-risk jurisdiction**: Saskatchewan, Canada, near existing power and transportation infrastructure
• **Fully-permitted**: federal and provincial environmental permits in place

- Total potential plant feed: 470 MT
- Weighted average diamond grade: 14 CPHT
- Total recovered carats: 66 MCT
- Life of mine: 34 Years
- Base Case model price (pre tax & royalties): NPV (7%) $3.3 Billion, IRR 22%
- Case 1 high model price (pre tax & royalties): NPV (7%) $5.4 Billion, IRR 32%
- Base Case model price (post tax & royalties): NPV (7%) $2.0 Billion, IRR 19%
- Pre-production capital cost: $1.41 Billion
- Initial capital payback period: 3.4 Years

NEW TECHNOLOGY PROVIDES ATTRACTIVE ECONOMICS OF PEA

- Tomra XRT diamond sorting machine: minimises diamond breakage, particularly for large stones
- Takraf compact bucketwheel excavator for removing overburden with lowest unit cost

* Project economics most sensitive to diamond price, grade & exchange rate
Bulk Sampling Site Construction Completed

**KIMBERLITE SEPARATION UNIT (KSU)**

RTEC’s KSU recovers washed kimberlite in the size range -80 to +0.85 millimetre, from the slurry that is pumped from the Trench Cutter rig and feeds the recovered kimberlite into cubic metre bulk sample bags.

**ON-SITE SAMPLE STORAGE AREA**

On-site cubic metre bulk bag storage area: 6,848 bulk bags of kimberlite awaited processing though Bulk Sample Plant. (October 8, 2019)

**ON-SITE BULK SAMPLING PLANT (INTERIOR)**

Bulk Sample Plant assembly by PCL and Consulmet as underway (September 23, 2019)

**ON-SITE BULK SAMPLING PLANT (EXTERIOR)**

Bulk Sample Plant building during construction (November 19, 2019)
Diamond Assortment: Star EJF +11 DTC

- Star UG EJF +11DTC diamonds sorted by Type (Type I and Type II) and Colour
- 2,608 stones weighing 1,601 carats
- High proportion of “white” diamonds and very low proportion of boart
Diamond Assortment: Orion South EJF +11 DTC

- Orion South UG EJF +11DTC diamonds sorted by Type (Type I and Type II) and Colour
- 772 stones weighing 310.8 carats
- High proportion of “white” diamonds and very low proportion of boart
